

Open Door Month

We are a team of software developers for the dental business

We give you a unique opportunity to visit one of our resources as an admin and as a client

Try all the features in full and imagine how this can work in your business

How often would you like to have full access to a competitor's CRM system and explore invisible functions on the admin side?

How often have you thought about how to improve communication with the customer using the dashboard?

Now you are getting a unique opportunity that is only valid for a month

The resource we invite you to visit is a simple case management system for creating treatment plans and selling ready-to-print models for the production of aligners.

This is a customer interaction system in which you can try the management process as an admin and create an order as a doctor or a dental lab owner.

You are given full access to all functions.

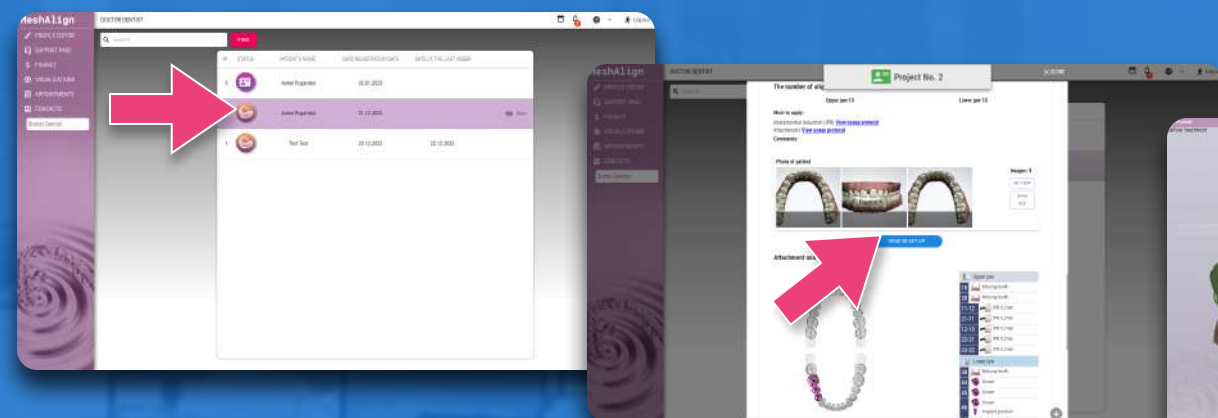

You can create orders, upload files, make test payments (without real funds), add treatment plans, visit the educational sections of the platform, etc.

You do not need to register and fill personal or company details.

You don't have to pay anything to get to the next level. All payments are test.

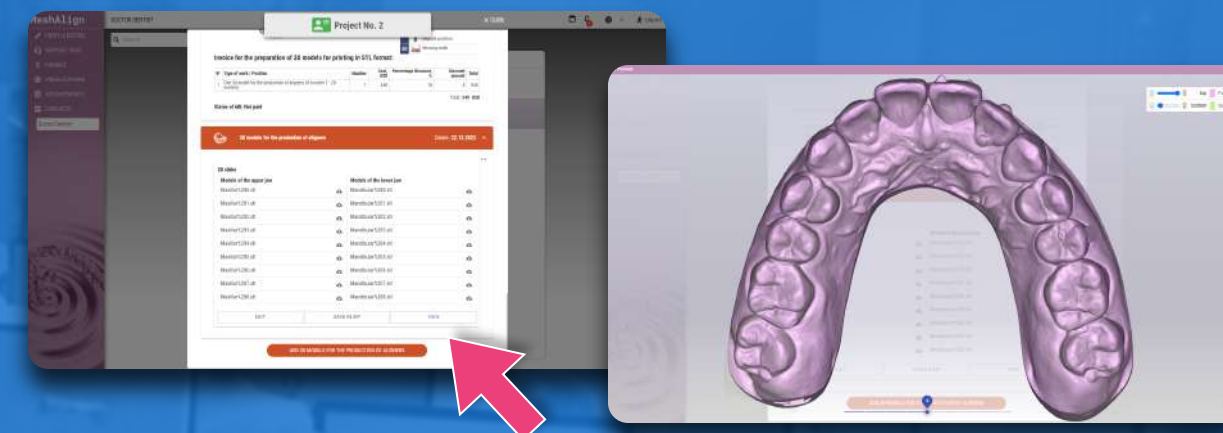

What can you see interesting:

◆ 3D setup using STL

or

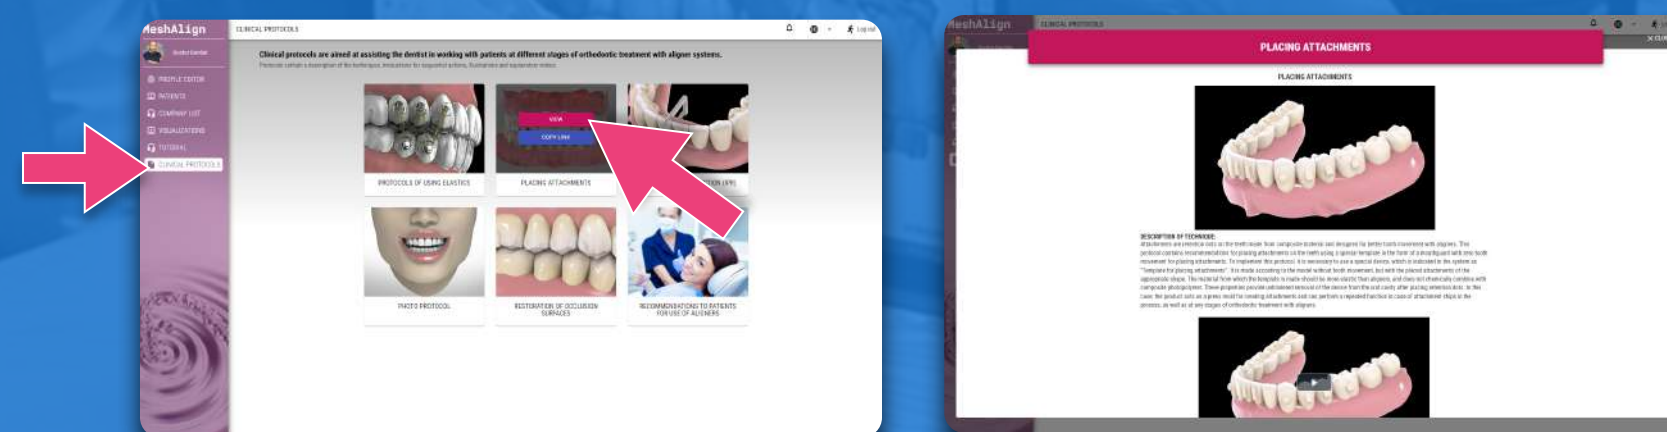

◆ 3D slider using STL

◆ Examples of treatment with aligners

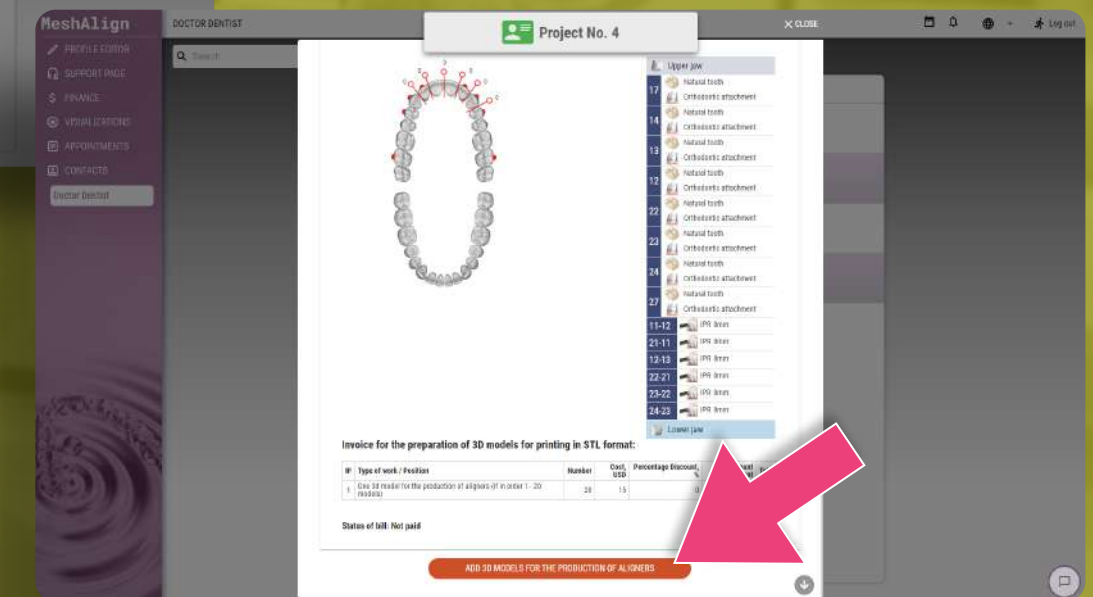

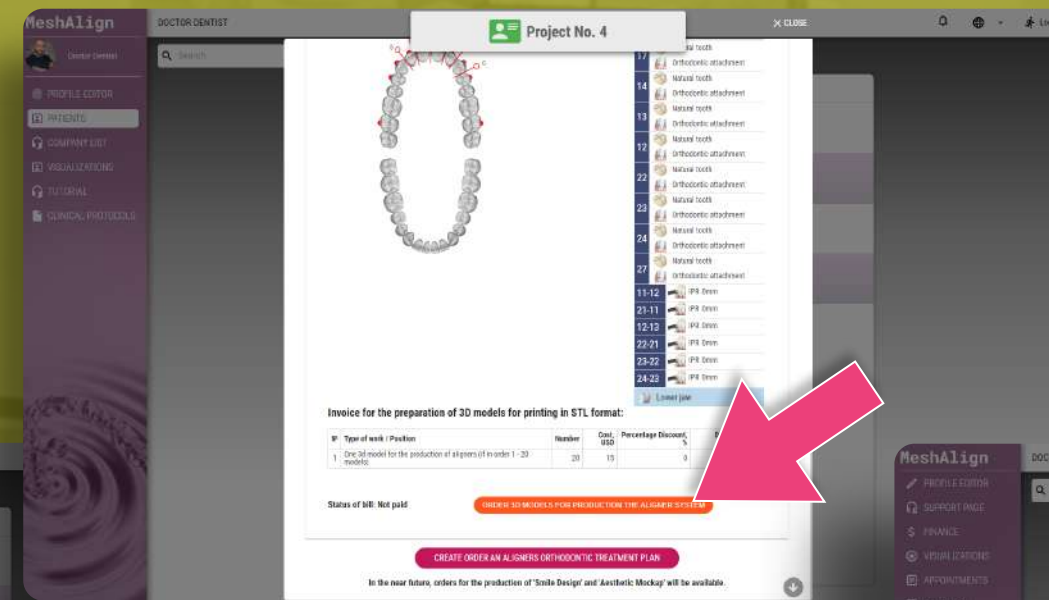

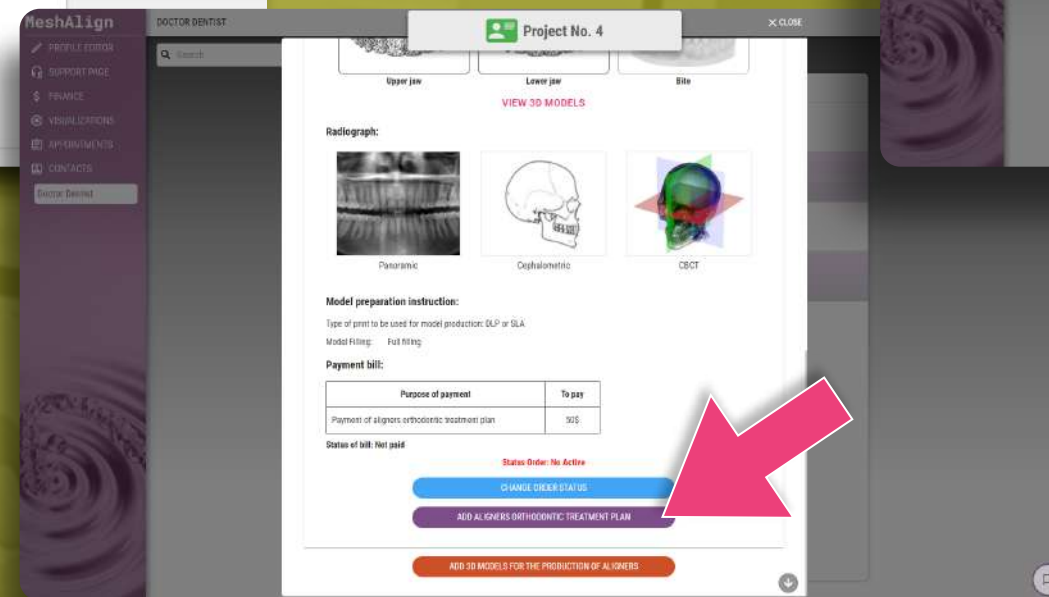

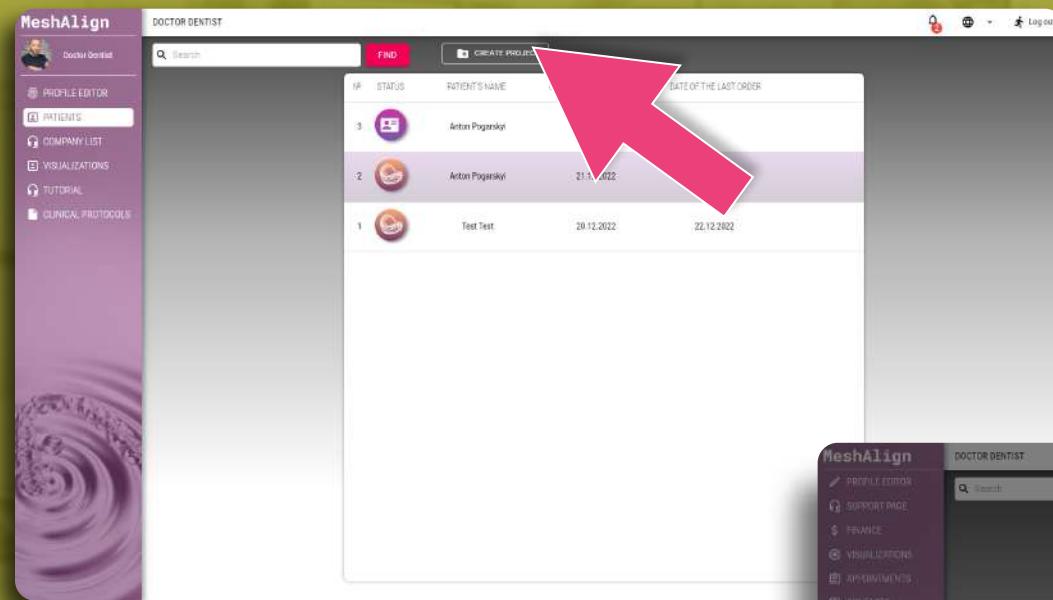

◆ Clinical protocols

What can you do interesting:

◆ Create order ➡ Create treatment plan ➡ Approve it ➡ Download 3D models for printing

And much more

Try yourself as an admin and a client
